About the Seminar

The market for patents has exploded over the past several years. Companies are buying, selling and licensing patents to supplement their existing portfolios and create revenue streams. Like land speculators, patent investors are pouring substantial sums into the market to amass assets that can be monetized for a substantial return. This is providing patent owners with new options for making money on their inventions. Further, companies are licensing patents to complete their intellectual property inventory and to maximize revenue.

This seminar will look at how the patent sales and licensing process really works for potential buyers and sellers. The faculty includes the country’s leading patent buyers and market makers who will share their insights on the various venues for patent purchases and how to optimize those transactions. Entering this new marketplace as an opportunistic buyer of patents presents unique issues of confidentiality and exposure as well as real or perceived intellectual property threats.

Experienced counsel on the faculty will provide tips and strategies for managing the process and conducting due diligence. Attendees will have a chance to learn ways to manage risks and participate successfully in the market-making process through early access to those who are influencing a brave new world of intellectual property exchange.

Program Co-Chairs: Marc S. Kaufman, Esq. and Michael Pierantozzi, Vice President
Marc S. Kaufman, Program Co-Chair, partner at Nixon Peabody LLP, is the Leader of the Patents Group and specializes in managing intellectual property assets in a variety of technical fields, including computer architectures, digital rights management, database technology, search engine technology and data mining.
